

Area of Science, Research, and Artistic Activities

The creative activities of pedagogical and research staff are primarily focused on research in the field of education and on studying pedagogical processes and phenomena that are fundamental to a knowledge-based society and sustainable development, examining curricula, and the impact of digital technologies on the educational process.

We consider it essential to present research results at various scientific and professional forums, as well as artistic exhibitions. We prioritize the dissemination of scientifically grounded facts to prevent the spread of false or fabricated information.

We consider artistic activity an essential part of creative work, supporting the presentation of its results at professional and artistic forums.

We also see it as equally important to expand international cooperation in the fields of pedagogical, psychological, and social sciences.

Our priority is to utilize all available grant schemes to secure financial resources for research activities.

In addition to expanding already established international institutional cooperation, we will intensively support all staff and PhD students in participating in significant scientific projects and motivate them to develop their scientific potential and transfer knowledge into relevant areas of practical application. The primary goals in this area will be:

- Support the expansion of a specifically focused scientific research community;
- Support research activities of staff and PhD students;
- Collaborate on research with other pedagogical, psychological, social, and other scientific institutions;
- Ensure integration of teaching and research in master's and especially doctoral programs;
- Develop scientific schools in relevant research areas;
- Recruit the best PhD graduates for faculty positions and create post-doctoral opportunities at internationally recognized research institutions;
- Foster and retain talented students through various student activities (e.g., ŠVOUČ);
- Support PhD student participation in international exchange programs;
- Improve the internal faculty system for monitoring and evaluating the quality of educational, creative, and professional activities based on relevant criteria;
- Define research priorities in line with scientific knowledge, its development, and current global trends in pedagogical, psychological, philological, artistic, and social sciences;
- Support research in the area of subject didactics, various subject-specific didactics, and research in higher education didactics;
- Organize scientific events for the academic community and popularization events for the wider professional public;

- Support the participation of pedagogical and research staff in international research mobility;
- Encourage the participation of pedagogical and research staff in professional committees, commissions, councils, editorial boards, and other national and international professional platforms;
- Promote the popularization of scientific results from authors' research both domestically and internationally.
