

Characteristics of the submitted research/ artistic/other output

Name and surname doc. PaedDr. Eva Severini, PhD.

Document type: Characteristics of the submitted research/ artistic/other output

The name of the university Comenius University Bratislava

The seat of the university Šafárikovo námestie 6, 818 06 Bratislava

Surname awarded to the assessed person	Severini
Name awarded to the assessed person	Eva
Degrees awarded to the assessed person	doc., PaedDr., PhD.
Hyperlink to the entry of the person in the Register of university staff	https://www.portalvs.sk/regzam/detail/5894
Area of assessment	Pre-school and Elementary School Education (1st degree and 3rd degree) and Teaching for primary education (2nd degree)
Category of the research/ artistic/other output	scientific output
Year of publication of the research/artistic/other output	2018
ID of the record in the Central Registry of Publication Activity (CRPA) or the Central Registry of Artistic Activity (CRAA)	ID: 84871

Annotation of the output in English

The scientific monograph focuses on the concept and the realization of a qualitative research in pre-primary education. It is a description of a research carried out in kindergartens. The advantage of the monograph is that it establishes a view on how to consider and conceive the realization of a qualitative research in the educational context of kindergartens with regard to the subjects and objects of the research. It accentuates the teacher of kindergartens and raises its professional attention to the need to be a teacher – a teacher and researcher, who deals with him or herself managed processes and their development. It provides the reader with information on the principles of a qualitative research and their elaboration in specific conditions. Another advantage of the monograph is that it deals with the question of didactic support for the development of a child's autonomy in pre-primary education. The concept of autonomy is elaborated in the monograph as an open concept of relative independence, self-reliance and self-sufficiency of a child who is in relationship and consciously collaborating with other children and teachers. The concept of autonomy is supported by the already mentioned realization of a qualitative research (action research) in the environment of Slovak and Serbian kindergartens on the basis of a close six-year cooperation with teachers. The results of the research are organically incorporated into the text – into the didactic and methodical elaboration with stimulating examples and suggestions as inspiration for pre-primary education. An autonomous child is depicted as an active, knowledgeable, competent and collaborating subject; as a congruent subject whose didactical support provided by teachers is deliberate and goal-oriented in an indirectly controlled participation within learning and teaching activities.

Characteristics of the output's impact on socio-economic practice

In addition to its topical content, the scientific monograph also contributes to the knowledge of qualitative methodological approaches in pedagogy. It is a demonstration in the implementation of concrete action research, using diagnostic and research methods. Thus, it enriches the professional and scientific character of the educational process, improves the quality of study of the study field of Teacher Training and Education Science. At the same time, it presents didactic possibilities of promoting the autonomy of the child/children in the process of teaching.

Characteristics of the output and related activities' impact on the educational process	This scientific monograph presents the implementation of qualitative research in a pre-primary teaching setting. On the basis of the description of the implemented research it presents the principles of qualitative methodology, the concept and design of action research in the conditions of the teaching process. It also presents evidence-based pedagogical diagnosis, the interaction of subjects in teaching through demonstrations, and the specific findings of the qualitative investigation carried out. The monograph can be used as a textbook in the field of Teacher Training and Education Science.

Annotation of the output in English	This scientific study presents the concept of qualitative research of early childhood education and care (ECEC) in facilities providing childcare up to three years of age. It focuses on caring of the youngest generation of children in the area of children's nursery centres, childcare facilities, where this care in its educational component, is rather unintentional, involuntary. At the time of the information boom, parents often have problems with choosing parenting strategies without any pedagogical advice or educational programs for children. The current adult society places great demands on active and significant life in society, but the issues of early childhood education and care are not addressed with adequate attention and seriousness.

Characteristics of the output's impact on socio-economic practice

The purpose of the publication is to acquaint the reader with the relevant scientific knowledge, so that he is able to design an educational program based on it and to design the educator's own educational activities. The publication can be used primarily for education in the field of raising children of the youngest generation, but it can also supplement the knowledge already acquired with the concept preferred by its authors.

Characteristics of the output and related activities' impact on the educational process	The publication can be used in teaching as teaching material. In teacher education, the publication enhances the quality of education by providing a summary of the most important educational parallels in childcare facilities up to three years of age. At the same time, it raises questions of basic principles in cooperation between the school and the family. At the same time, the authors believe that they have succeeded in filling a gap in the literature on this topic.

Annotation of the output in English	This chapter focuses on the educational potential of augmented reality for support of scientific literacy in pre-primary education. The authors give a brief overview of the area and of selected applications suitable for preschool children. They then focus on two of them, 4D animal and Quiver Vision, which were used in a research project involving two Czech and two Slovak kindergartens as well as 5 preschool children's parents. This action research project was conducted within the context of science education and included semi-structured interviews with teachers from of children involved in the research, and preschool children's parents, as well as direct and indirect observations of children while involved in augmented reality in educational activities. The research showed that many teachers were not familiar with the technology of augmented reality, and some teachers expressed worries about how to employ augmented reality at preschool age. Additionally, the teachers shared creative ideas on how these technologies can be included in the offered activities.

Characteristics of the output's impact on socio-economic practice	Augmented reality applications bring completely new opportunities, but they also place new demands on both teachers and children/pupils. If the teacher selects suitable applications, follows the didactic principles of their use, augmented reality applications have a high potential for the development of science literacy in general and preschool/younger school age is not an obstacle.
Characteristics of the output and related activities' impact on the educational process	This chapter presents the concept of action research on the use of augmented reality applications with a focus on the possibilities of developing children's science literacy in pre-primary and primary education. Students of future teachers can use it in higher education as teaching material.

Annotation of the output in English	In this article, we present the results and interpretations of our research, the aim of which was to create a certain picture of how the preparation is set, but also the motivation of students in the programs of Preschool and Elementary Pedagogy for science course. We focused on the area of self-regulation of learning and motivation for science education for future teachers. We start from the methodological approach rooted in the theory of self-determination. We consider the most important finding to be the positive motivation of students for science. Within science subjects we see an opportunity to use the student's portfolio as a means of his trajectory of development and self-regulation of learning.

Characteristics of the output's impact on socio-economic practice	The study presents the results of research aimed at identifying and analyzing the preparation, but also the motivation of students in the programs of the Department of Preschool Elementary Pedagogy for science course. From the point of view of scientific disciplines, the findings declare a higher incidence of internal motivation as well as autonomous learning style, which we understand as a prerequisite for regulating one's own behavior in terms of achieving the required science literacy.
Characteristics of the output and related activities' impact on the educational process	In addition to the above findings, the study raises the question of using the student's portfolio as a means of his trajectory of development and self-regulation of learning, but also of supporting research-oriented education using elements of social constructivism. Less theory more practice (experiments) in programs Preschool and elementary pedagogy for science course.

Annotation of the output in English	The academic monograph presents legislation and possibilities of individual (home) education. There is currently a public debate about this form of education. The aim of the monograph is to find out what possibilities of home education we have within the Slovak and Czech legislation, which on the one hand testifies to the attitude of the state to this form of education and on the other hand significantly affects specific educational practice. The legislation of individual countries, professional literature of leading experts in this field and relevant internet sources are used as a source of information. The advantage of the monograph is that it provides an insight into how to consider and conceive the implementation of children's education in the home environment with regard to the specifics of the family. Another advantage of the publication is that it deals with the question of the reason for the decision for individual (home) education in the interpretations of parents.

Characteristics of the output's impact on socio-economic practice

Due to the prevalence of discussions on the topic, it was necessary, indeed desirable, to conduct research on the possibilities of using individual (home) education. The results of the qualitative research survey are summarised in a SWOT analysis, which presents a set of strengths and weaknesses of individual (home) education linked to the opportunities and threats of the issue. The aim of the monograph is to address not only the scientific community, but above all the general public, including legislators, teachers and actors of individual (home) education.

Characteristics of the output and related activities' impact on the educational process

The scientific monograph is an example of the implementation of a specific qualitative research, using an in-depth interview as a research tool for data collection. It provides information on the possibilities of implementing individual (home) education in specific conditions. Gives importance to the parent and draws his/her attention to the need to be an educational actor of his/her own children, engaged in the processes controlled by him/her and their improvement. In addition to its topical content, it also contributes to the knowledge of the methodology of educational research. In this way, it enriches the professional and scientific character of the educational process, improving the quality of the study of the field of Teacher Training and Education Science.
